

ifa systems AG and Topcon Corp. announced their interest to enter a long-term strategic and technological cooperation. Topcon also plans to make a public bid to acquire 50,1 % of ifa shares which are listed at the Entry Standard, Deutsche Börse, Frankfurt. This transaction is supported by the ifa management members (officers and directors) who agreed to offer the shares they are holding according to the public bidding conditions.

At the annual AAO meeting in Las Vegas (Nov. 13-17, 2015) both partners launch the future-oriented cooperation by presenting the first joint product, **IMAGEnet Connect**. The new system combines the long TOPCON history and tradition of digital image management with the latest software technology and connectivity. The new generation is positioned as a “Vendor Neutral Archive” (VNA) as it can of course connect to all TOPCON devices and software applications but also integrates more than 400 additional “third-party” instruments and diagnostic equipment.

The ifa team presents the new version of the **ifa Premium EMR/EHR** with the sophisticated MSD technology (Multi Screen Display) which represents the latest “state-of-the-art” user comfort and process efficiency.
