

The international ifa customer base is growing every months: more than 12.000 users switch on every morning their ifa software to provide better and more efficient eye care. Now the ifa team introduces a new version with an outstanding new module at the AAO meeting in Chicago. The new “Chart Monitor” module is an electronic watch dog which ensures that all relevant data entries are made into the EMR.

This unique module allows to monitor the completeness and compliance of the patient record “on the fly”. That ensures users that their charts are always compliant with clinical and business requirements. The “Chart Monitor” can be easily customized by the user within minutes and adapted to additional individual needs. The ifa “Chart Monitor” is the true solution for meaningful use!

Where can you learn more about this EMR innovation?
